
unstable: whole-sign true parity power
xi coordinate 1
xi coordinate 2
single-test Pd (%)
energy = 10
unencoded peak = 0.1
peak-most harmful E10
weakest E10 detection
weakest danger-set detection
stable: whole-sign true parity power
same packets 0..4; per-test alpha=1/300
Gaussian
normalized Gaussian
whole sign
coordinate sign
Haar SO(2)
public alternating
no encoding + standard spatial match
no encoding + spatial energy
single-test Pd on danger boundary (%)
energy-whitened projective angle (degrees)
